

Wheel of Item — Streamer Quick-Start Guide

Donate → spin a wheel / gachapon / tarot live on stream · works with Streamlabs · Gank · Ko-fi · StreamElements · OBS

You'll need: a Google account (to sign in) + streaming software (OBS or Streamlabs)

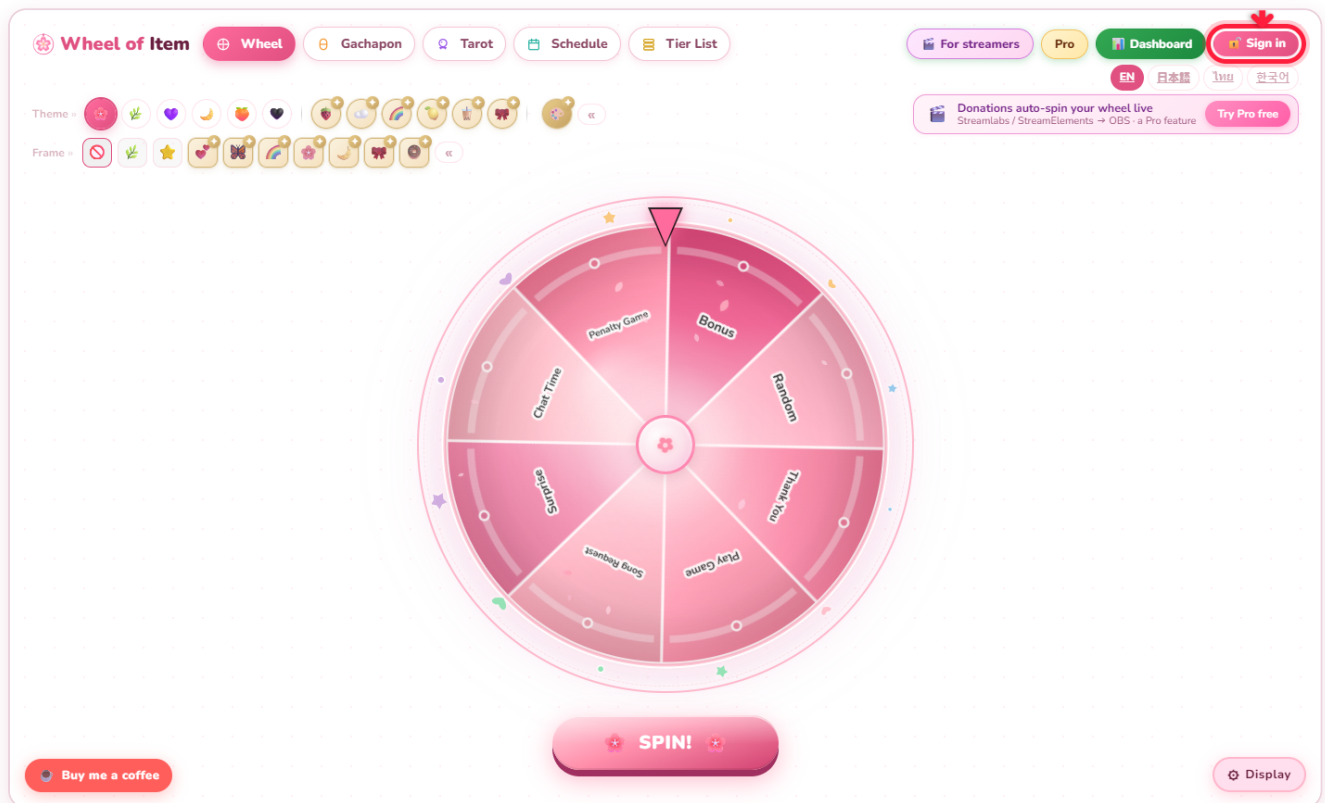

● Red circles / arrows in the images = where to click or select

Part 1 · Getting started

From building your wheel → save → open the streamer page → put it on OBS

1 Open the site & sign in

Go to **wheelofitem.com** and click **"Sign in"** (with your Google account) at the top-right

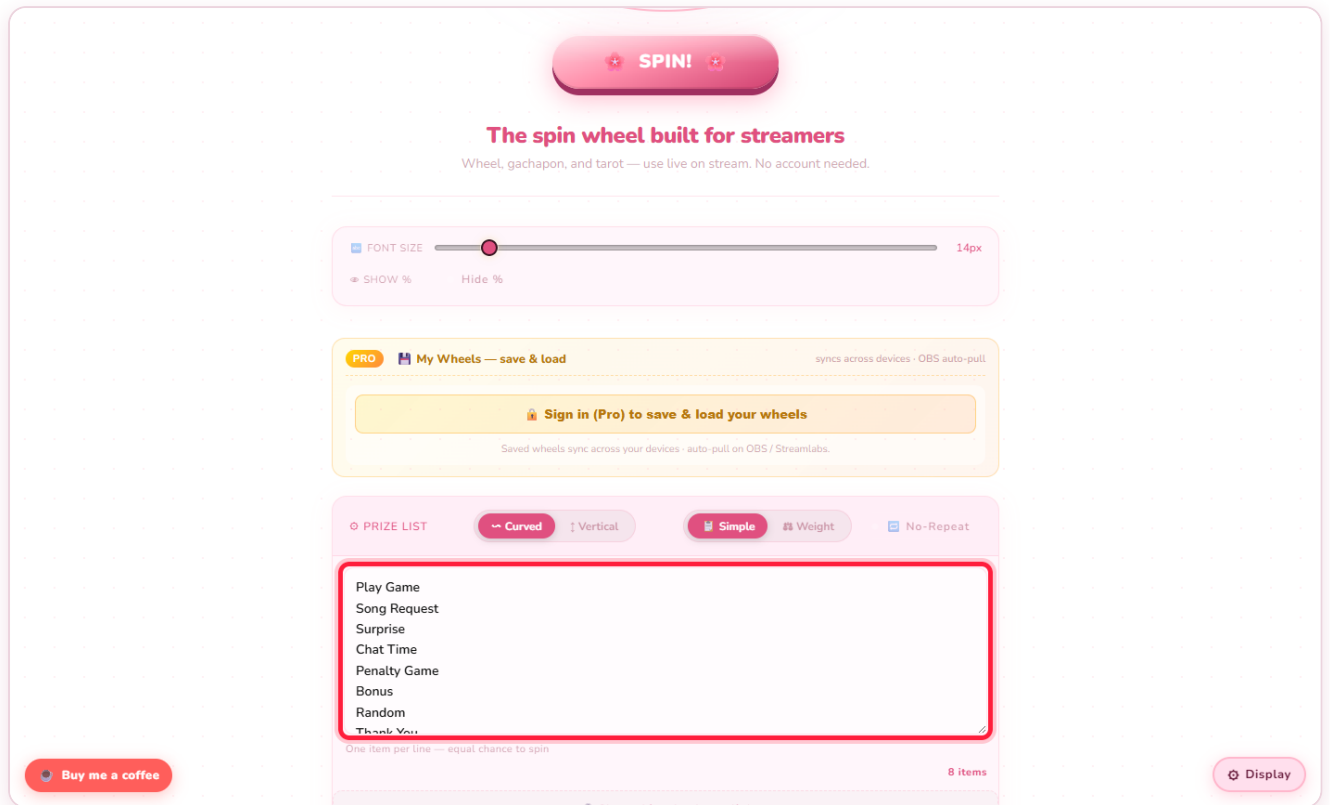

Click "Sign in" at the top-right (red circle)

2

Add your prizes

Scroll to the **"Prize List"** box and type your prizes, **one per line** — pick a theme / frame / colors; the wheel updates instantly

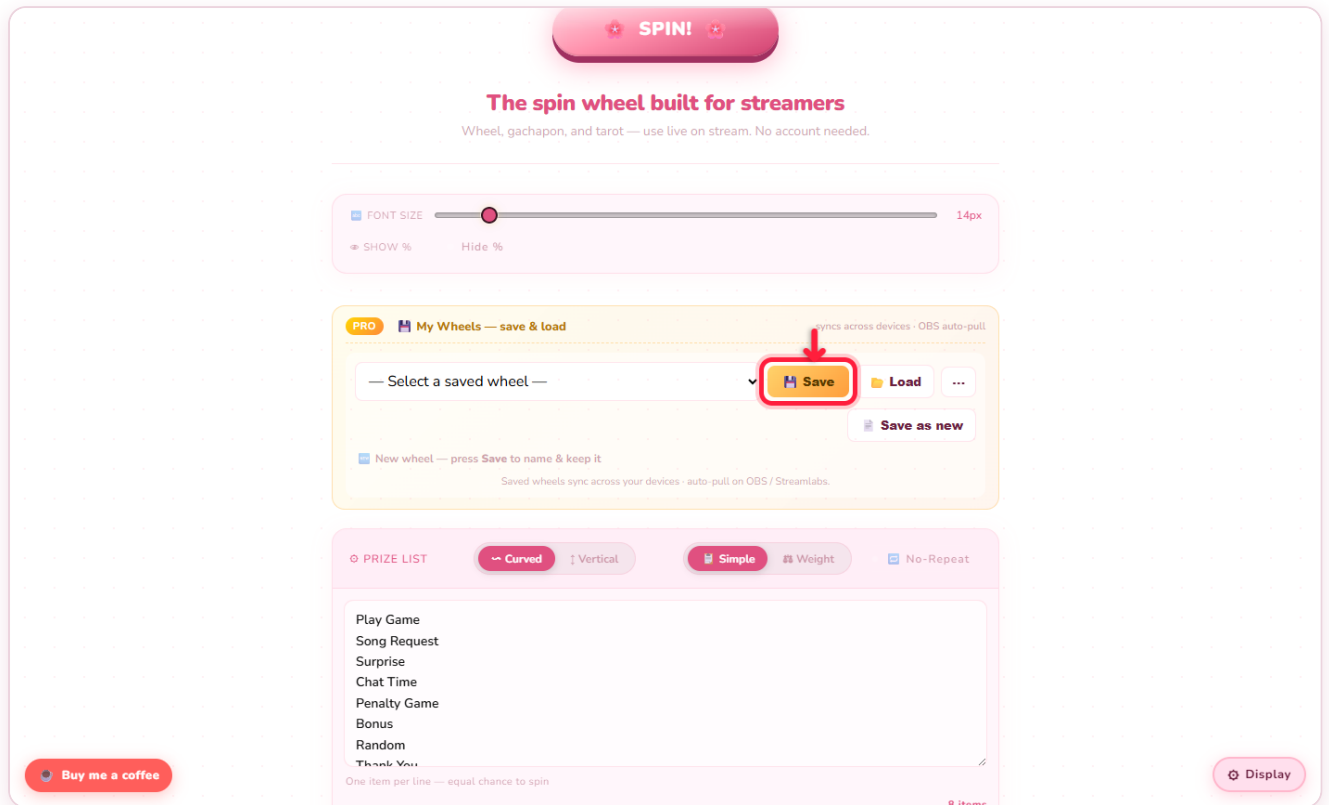

Type your prizes in the "Prize List" box (red circle)

3

Click Save — store it as a template

In the “**My Wheels**” box (above the Prize List) click “ **Save**” and name it → your wheel becomes a **template** you can pick on the streamer page (and OBS auto-pulls it)

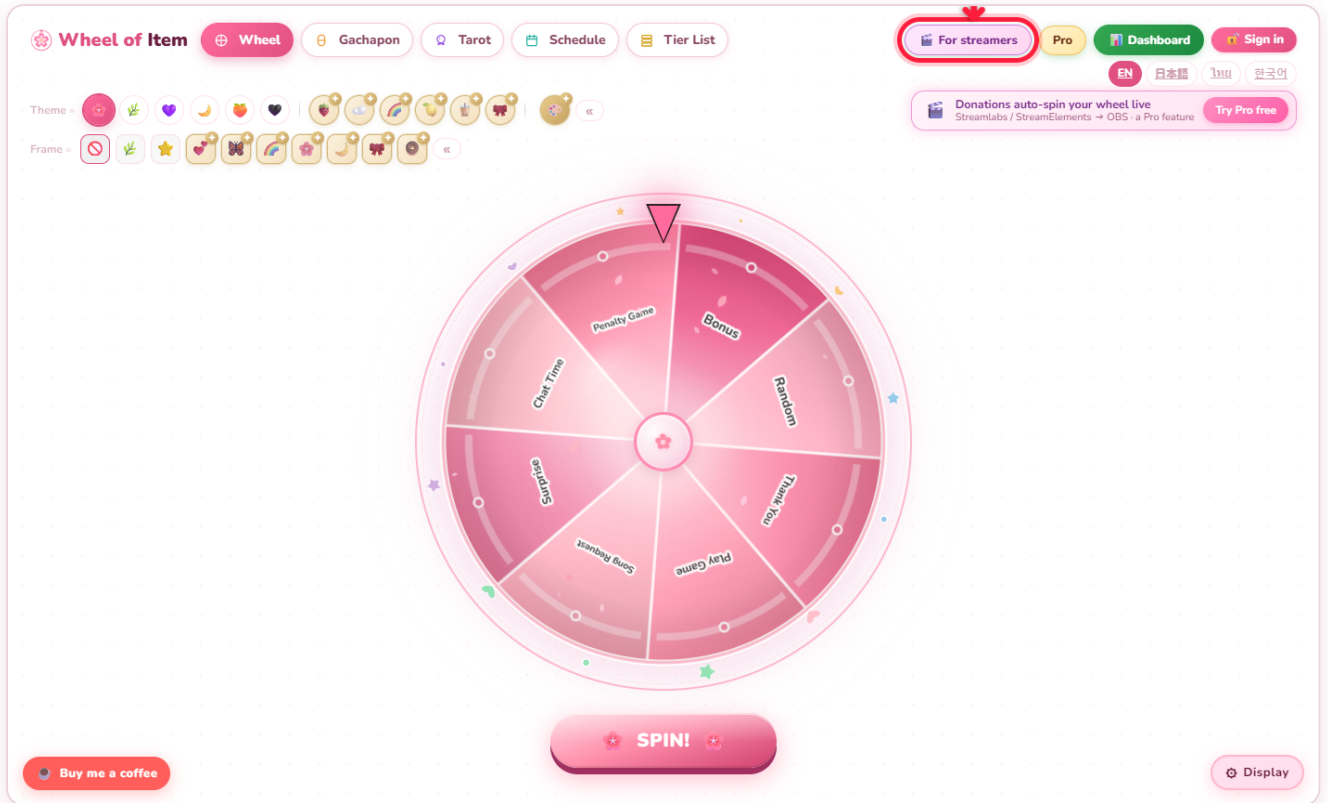

Click “ Save” to store it as a template (red circle)

4

Open the streamer page

Click the “ For streamers” button at the top-right to open the **streamer setup dashboard**

Click the “ For streamers” button (red circle)

5

Pick a template & turn it “Live”

Under the **Wheel / Gachapon / Tarot** tab, pick the template you just saved, then **flip the switch to green “Live”** (green templates spin / roll automatically on donations)

Wheel of Item Wheel Gachapon Tarot Guide Dashboard EN 日本語 العربية 한국어 Pro

1 Choose a wheel or gachapon

Wheels saved on wheelofitem.com. Click one to use it as your stream widget.

☒ Wheel ☐ Gachapon ☐ Tarot ☐ No wheel

☒ Live **Wheel** 4 items - sakura

☐ Audio on (off by default — OBS handles audio mix)

☐ Spin slowly while idle (normal mode)

How the Live toggle works: Click ☒ Live on a card to let real donations trigger that template — or ☐ Off to ignore them. Turn **Off** templates that aren't in your current OBS scene so they don't spin silently in the background and pollute your pull history. New saves default to **Off** — toggle them on before going live.

2 Donation trigger PRO

Spin the wheel automatically when someone donates — supports Streamlabs and Gank. Fill in whichever sources you use.

DONATION SOURCE

All sources (Streamlabs + Gank)

▼ Streamlabs socket token

STREAMLABS SOCKET TOKEN

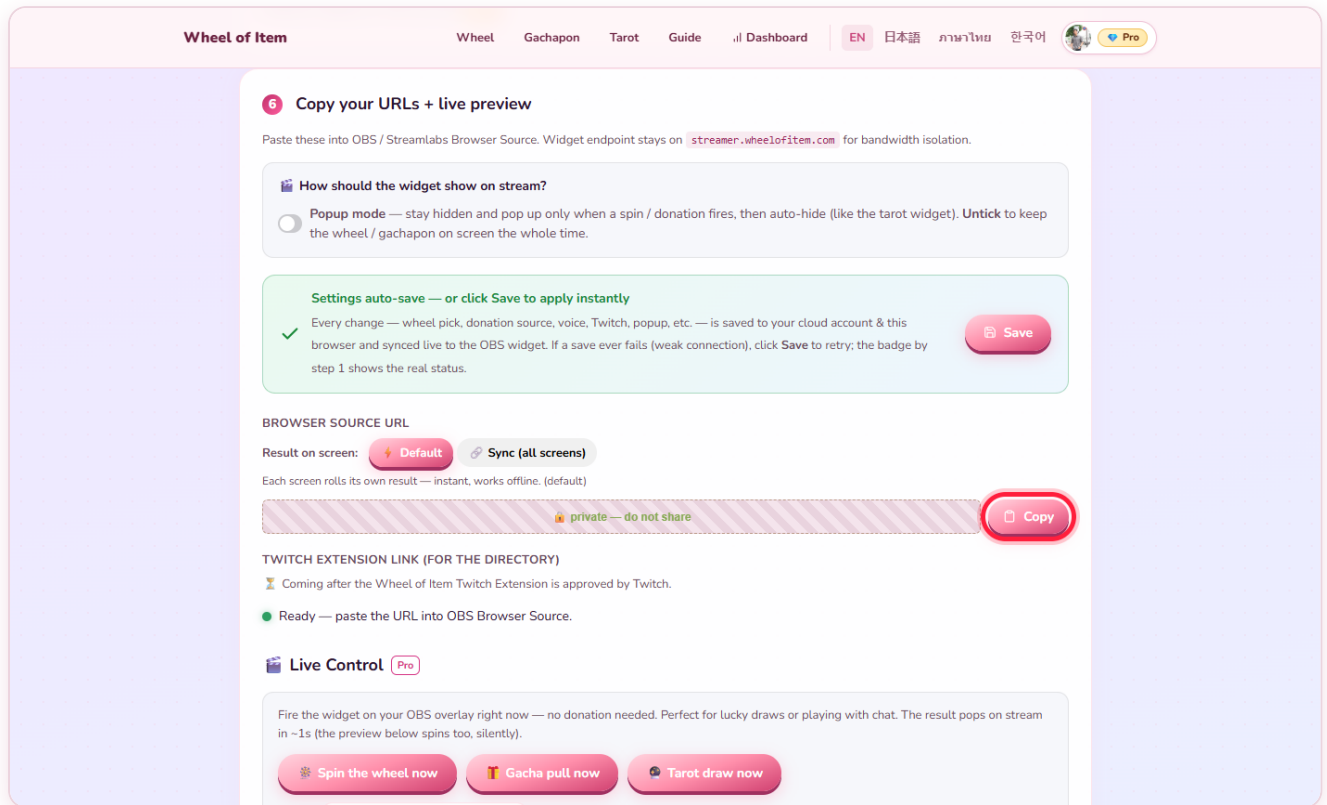

Find it at streamlabs.com → Settings → API Settings → API Tokens → "Show Socket Token" (see example). Stored in your browser only — never sent to wheelofitem.com servers.

Flip the switch to green “Live” (red circle)

6

Copy your OBS link KEY

Scroll to **"Copy your URLs"** and click **"Copy"** — this is **your own private link** (it carries a personal token, **don't post / share it publicly**)

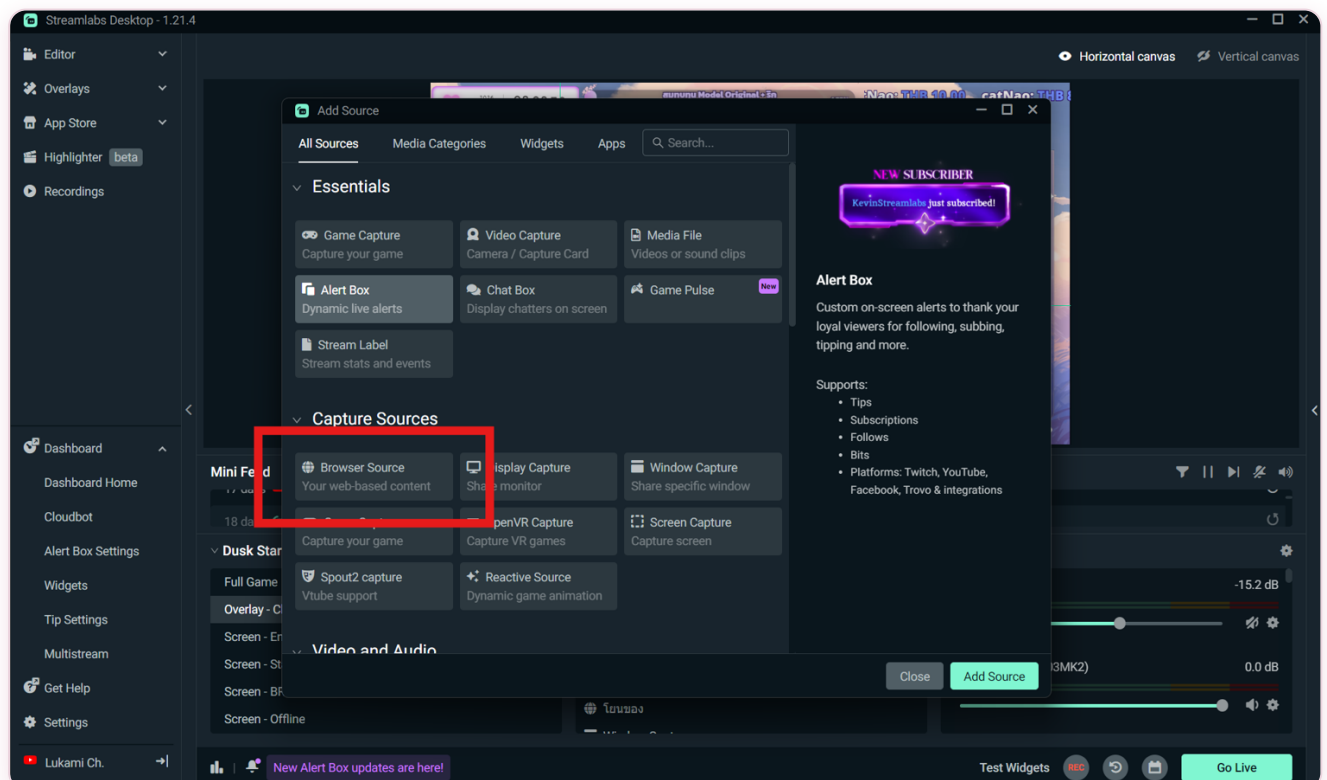

Click "Copy" (the blurred field = your private link)

7

In OBS: add a Browser Source

Open your streaming app, under **"Sources"** click + → choose **"Browser"** → name it → OK

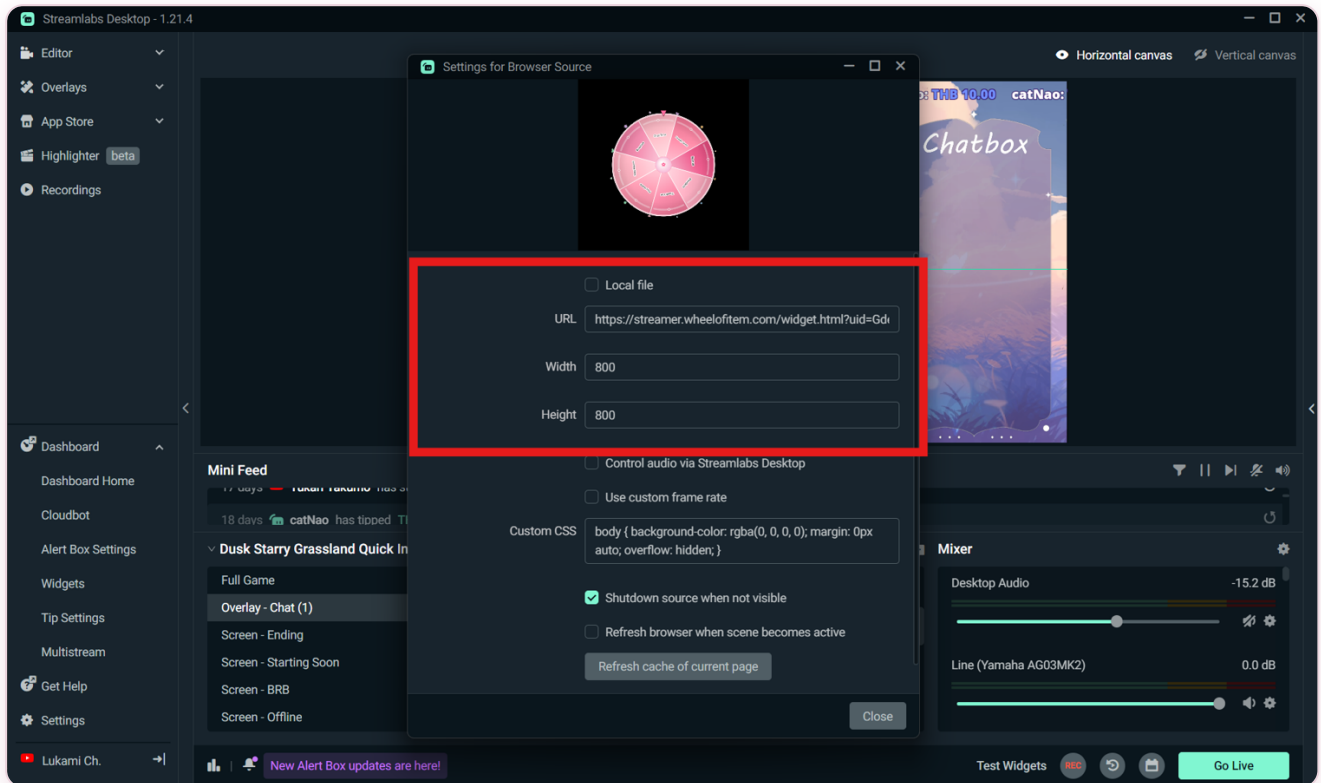

Sources → + → Browser (red circle in the image)

8

Paste the link & set the size

Paste your copied link into the “URL” field, set Width / Height (e.g. 800 × 600), then click **OK**

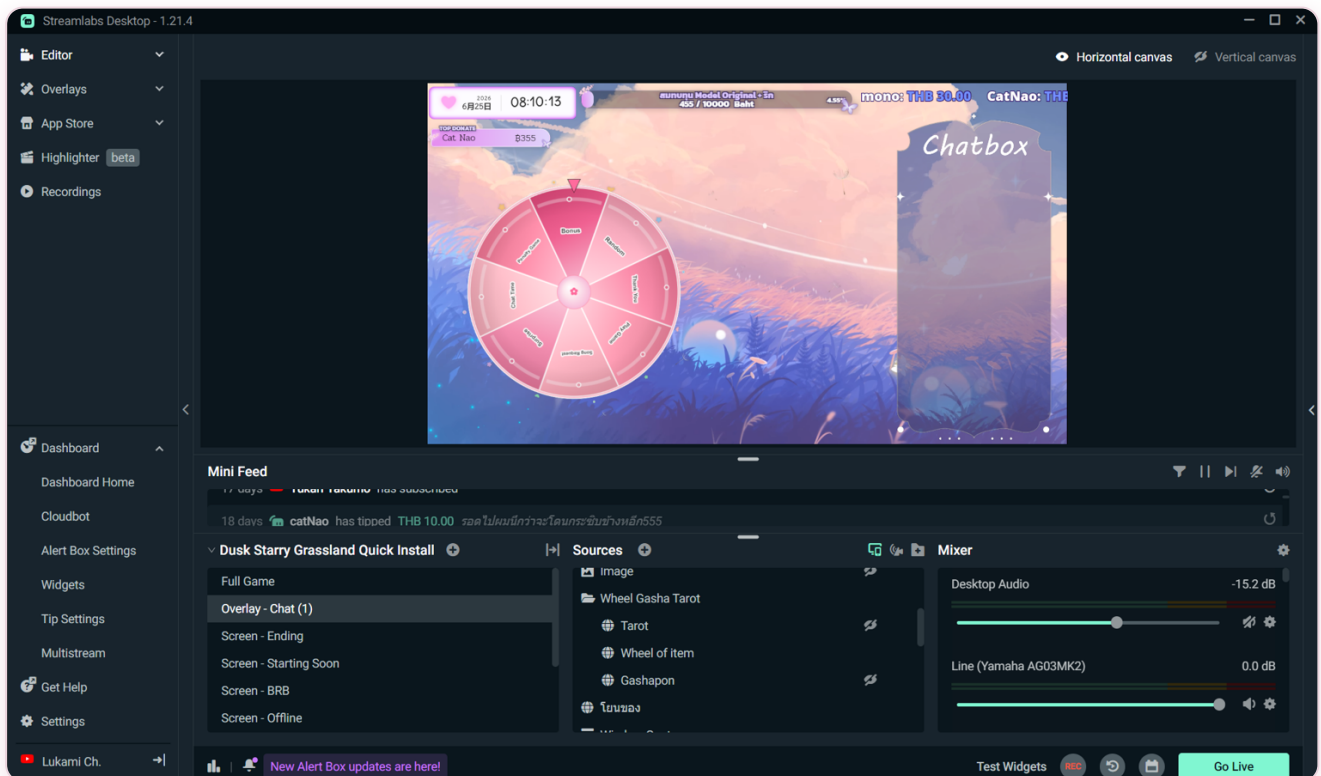

Paste the link in the URL field + set size (red circle)

9

Done! The wheel is live on your scene

The wheel appears right away — drag to reposition / resize. When a viewer donates it spins automatically (and reads the name via TTS / reacts in VTube Studio, if set up)

Your wheel is ready on your OBS scene

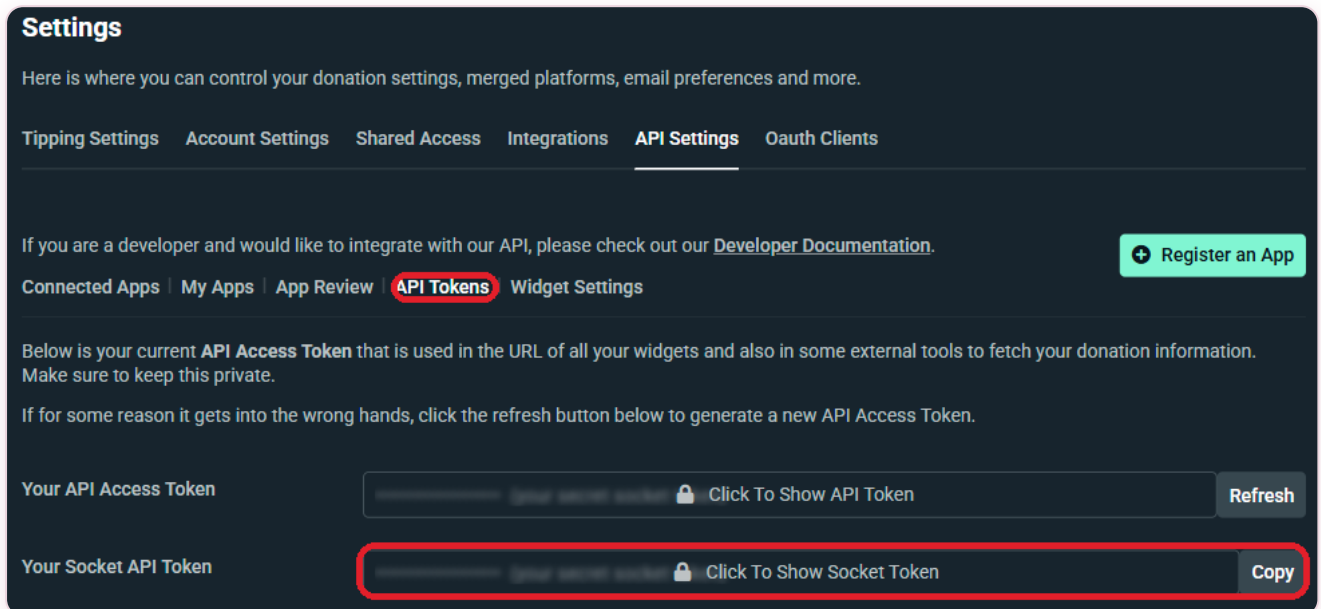

Part 2 · Auto-spin on donations

Connect a donation platform — a Pro feature

10

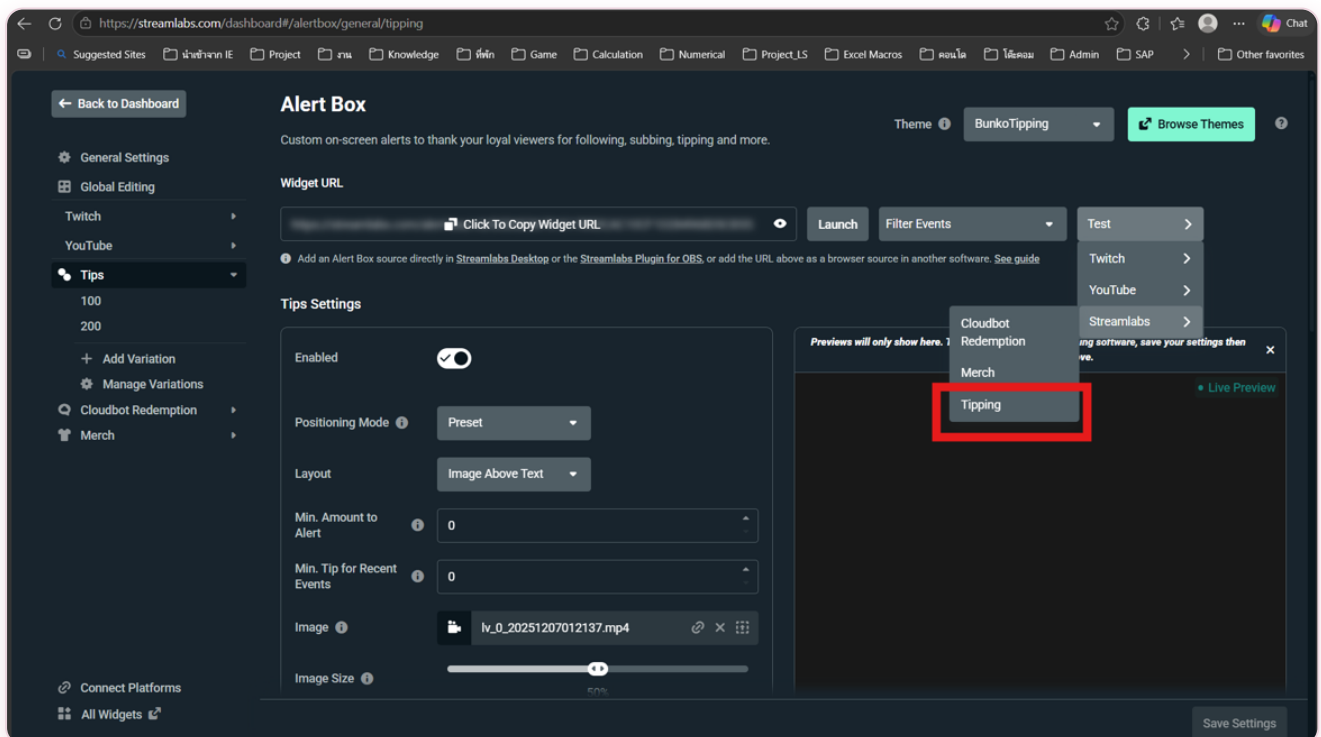

Streamlabs — auto-spin on tips PRO

① **Get the token:** open streamlabs.com/dashboard#/settings/api-settings → **API Tokens** tab → click **Copy** on “Your Socket API Token” → paste it on the streamer page (Donation trigger → Streamlabs)

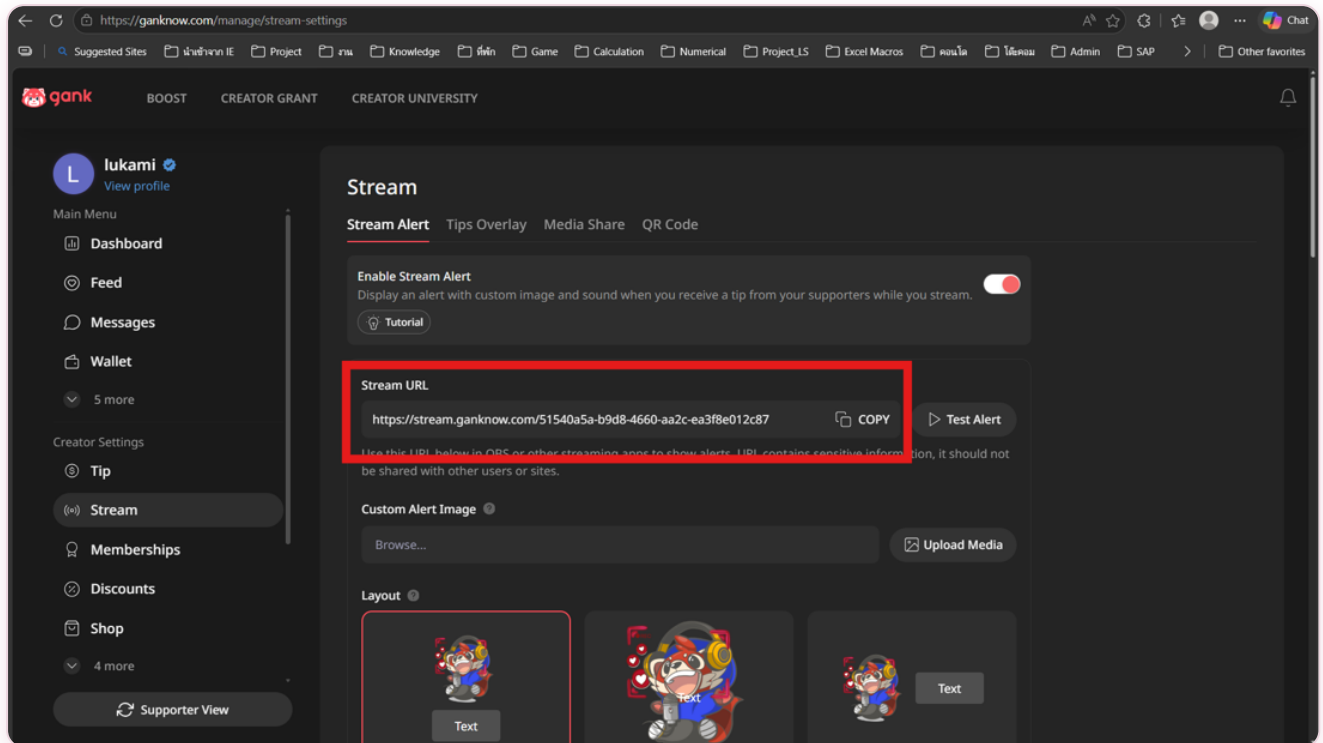

Streamlabs: Copy “Your Socket API Token” (red circle)

② **Test it:** open streamlabs.com/dashboard#/alertbox/general/tipping → **Test** button (top-right) → choose **Tipping** → it fires a test tip and your wheel spins

Streamlabs: Test → Tipping (red circle)

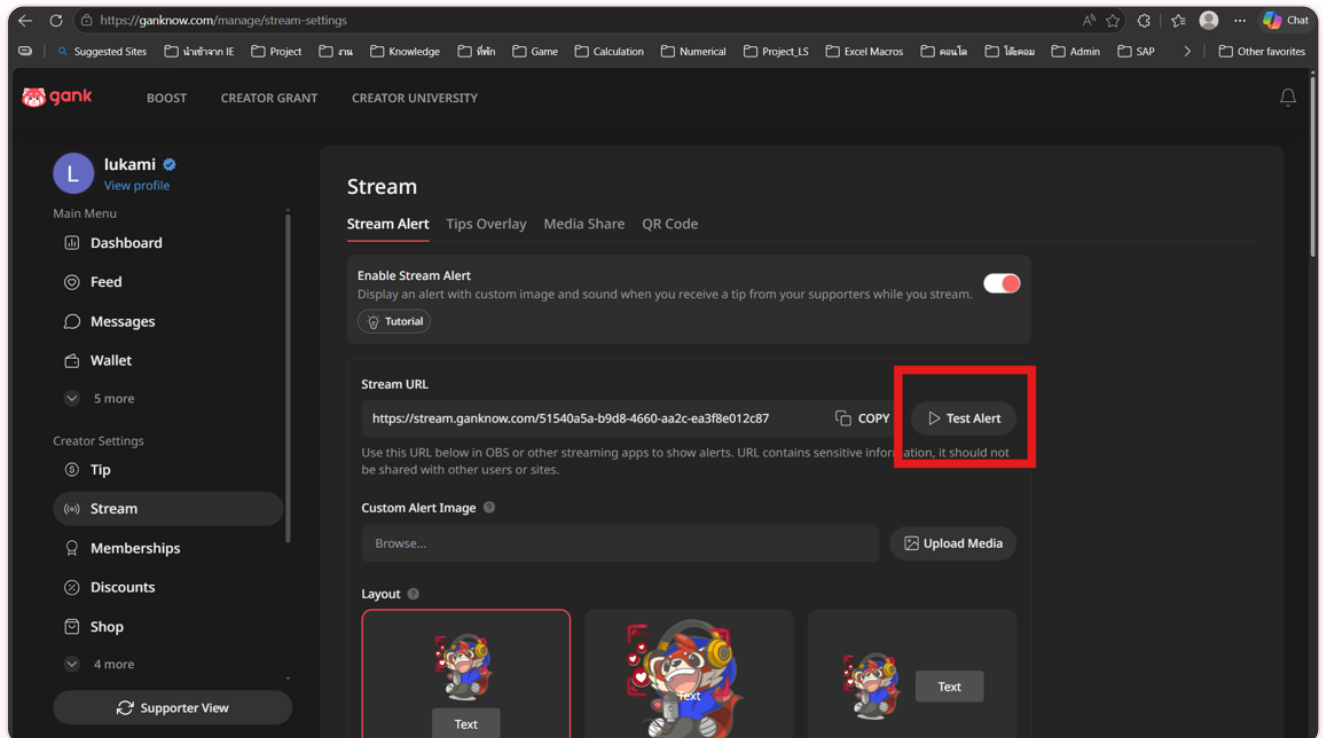

① **Get the URL:** open ganknow.com/manage/stream-settings → **Stream** menu → **Stream Alert** tab → click **COPY** on “Stream URL” → paste it on the streamer page (Donation trigger → Gank)

Gank: COPY “Stream URL” (red circle)

② **Test it:** on the same page click “Test Alert” → it fires a test tip and your wheel spins

✓ Ko-fi and StreamElements are supported too — pick them in “Donation source”

Gank: “Test Alert” button (red circle)

Part 3 · Fine-tuning (in the streamer dashboard)

Optional extras — everything lives on the “For streamers” page

1 Choose a wheel + display options

(continued from step 5) Besides the “Live” switch there is also:

Audio on — widget sound, off by default so OBS handles the mix · **Spin slowly while idle** — the wheel spins gently before any donation

2 Donation trigger PRO

Donation source — pick: Streamlabs / Gank / Ko-fi / StreamElements (or “All sources”)

Token / URL — paste your Streamlabs socket token or Gank Stream URL (see steps 10–11)

Minimum to trigger — tips below this don’t spin (0 = every donation)

Delay before spinning — wait N seconds after a donation so the alert finishes first

Wheel of Item Wheel Gachapon Tarot Guide Dashboard EN 日本語 ไทย 한국어 Pro

2 Donation trigger PRO

Spin the wheel automatically when someone donates — supports Streamlabs and Gank. Fill in whichever sources you use.

DONATION SOURCE

All sources (Streamlabs + Gank)

▼ Streamlabs socket token

STREAMLABS SOCKET TOKEN

private — do not share

Find it at streamlabs.com → Settings → API Settings → API Tokens → “Show Socket Token” (see example). Stored in your browser only — never sent to wheelofitem.com servers.

GANK STREAM URL

private — do not share

private — do not share

Paste your Gank **Stream URL** (Gank → Stream Settings → Stream Alert). We read your Gank tips and spin the wheel / draw a card when one arrives.
Note: unofficial direct link to Gank — may need updating if Gank changes their system.

MINIMUM DONATION TO TRIGGER

0

Donations below this amount are ignored — no spin, no draw. Applies to every template (wheel, gachapon, tarot). 0 = every donation triggers (default).

DELAY BEFORE SPIN (SECONDS)

0

Wait *N seconds* after the donation arrives before the gachapon pops up and spins. Useful when you want Streamlabs' normal donation alert (image + sound + donor name) to finish playing first — then the gachapon takes over.
0 = spin immediately (default). Typical Streamlabs alert is ~7–15 seconds. **Max 60 seconds.**

Set the donation source + minimum + delay (token/URL fields blurred = private)

3

Donation voice (TTS) PRO

Read aloud on each donation · **Voice** free (browser) or premium (Google Chirp HD)

Minimum to read · **Speed / volume** · **Message template** e.g. {donor} donated {amount} {currency} {message}

Wheel of Item

VTube Studio PRO

Make your VTuber model react / play a hotkey automatically on donations — **the full flow:**

1. Open the free **VTube Studio** app on the **same PC as OBS**, load your model, and **keep it running** while you stream
2. In VTube Studio: **Settings (gear)** → find **"Plugins / Start API"** → switch it **ON** (default port 8001)
3. On the streamer page: turn on **"Turn on VTube Studio reactions"** → click **"Connect to VTube Studio"**
4. **Switch to the VTube Studio window** — a **popup appears inside the app** asking to allow "Wheel of Item" → click **Allow** (one time only · see the image below ↓)
5. Back on the web page: click **"Load my hotkeys"** → pick the **"Animation on donation"** + set the minimum amount / delay / auto-off seconds
6. Click **"Play test animation"** — the model moves = connected 

et of Item

Wheel Gachapon Tarot Guide Dashboard EN 日本語 简体中文 한국어

Make your VTuber avatar react when someone donates — your model plays an animation (a "hotkey") automatically. You need the free VTube Studio app running on the **same PC as OBS**.

☐ Turn on VTube Studio reactions

1. In VTube Studio, switch the API on.
Open Settings (the gear icon) → find "Plugins / Start API" and turn it ON (it uses port 8001). Keep VTube Studio open.

2. Connect — you only do this once.
Click the button below. A small popup appears *inside VTube Studio* asking to allow "Wheel of Item" — click **Allow**.

[Connect to VTube Studio](#)

3. Pick the animation to play on a donation.

[Load my hotkeys](#)

ANIMATION ON DONATION
— click "Load my hotkeys" first —

IGNORE DONATIONS SMALLER THAN (0 = REACT TO ALL)
0

WAIT BEFORE REACTING (SECONDS)
0

Give your alert or voice a moment first. 0 = react instantly.

THEN TURN THE EXPRESSION OFF AFTER (SECONDS, 0 = LEAVE ON)
0

Best for a **Toggle Expression** hotkey — it re-fires the hotkey to turn the facepose off. Leave 0 for animations (they end on their own). ✨
Cleanest: set "Auto-deactivate after N seconds" on the expression hotkey inside VTube Studio, then leave this 0.

CONNECTION ADDRESS (ONLY CHANGE IF YOU CHANGED THE VTS PORT)
ws://localhost8001

PLUGIN TOKEN (FILLED IN AUTOMATICALLY AFTER YOU CONNECT)
.....

Saved to your account — VTube Studio reconnects automatically each session, on any computer.

4. Test it.
[Play test animation](#)

5. VTube reacts to each prize — set an outfit/pose per wheel result (+ timing)

 Wheel prize → outfit change
Each prize can switch your VTuber's outfit or pose. Set it up below ↓

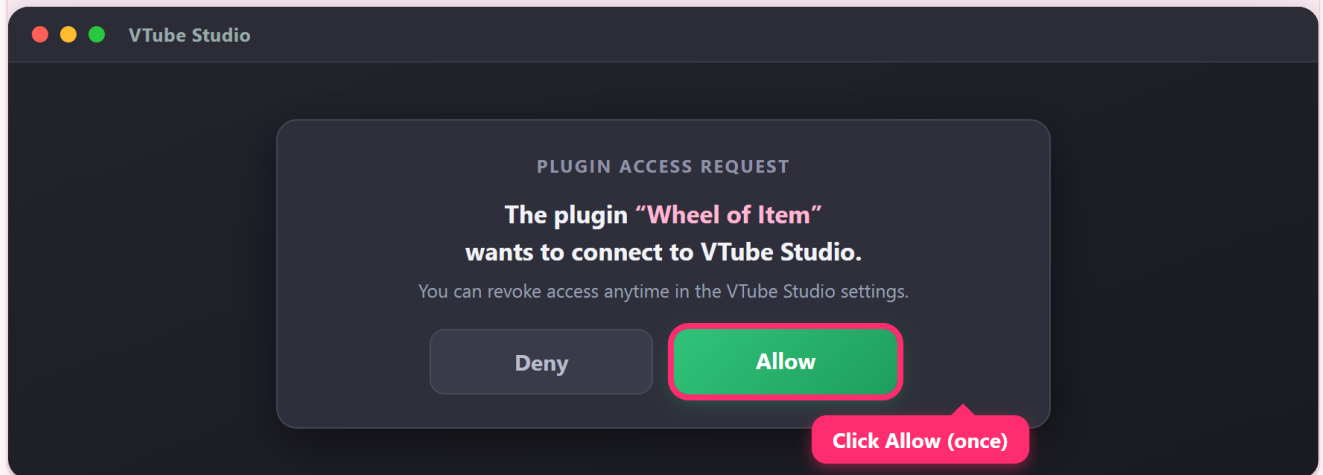

[Set up the per-prize table](#)

The VTube Studio section on the streamer page

The permission popup (step 4) — it appears **inside the VTube Studio app, not in the browser**: the “Wheel of Item” plugin asks to connect → click **Allow**, and the “plugin token” field on the web page fills in automatically · the token is saved to **your account** — from then on both the streamer page and the OBS widget **reconnect on their own**

⚠ No popup? Check ① VTube Studio is actually running ② “Start API” is ON in its Settings ③ the address on the web page is **ws://localhost:8001** (the default — don’t change it unless you changed the port), then click “Connect” again

! This popup appears “inside the VTube Studio app” — not in the browser

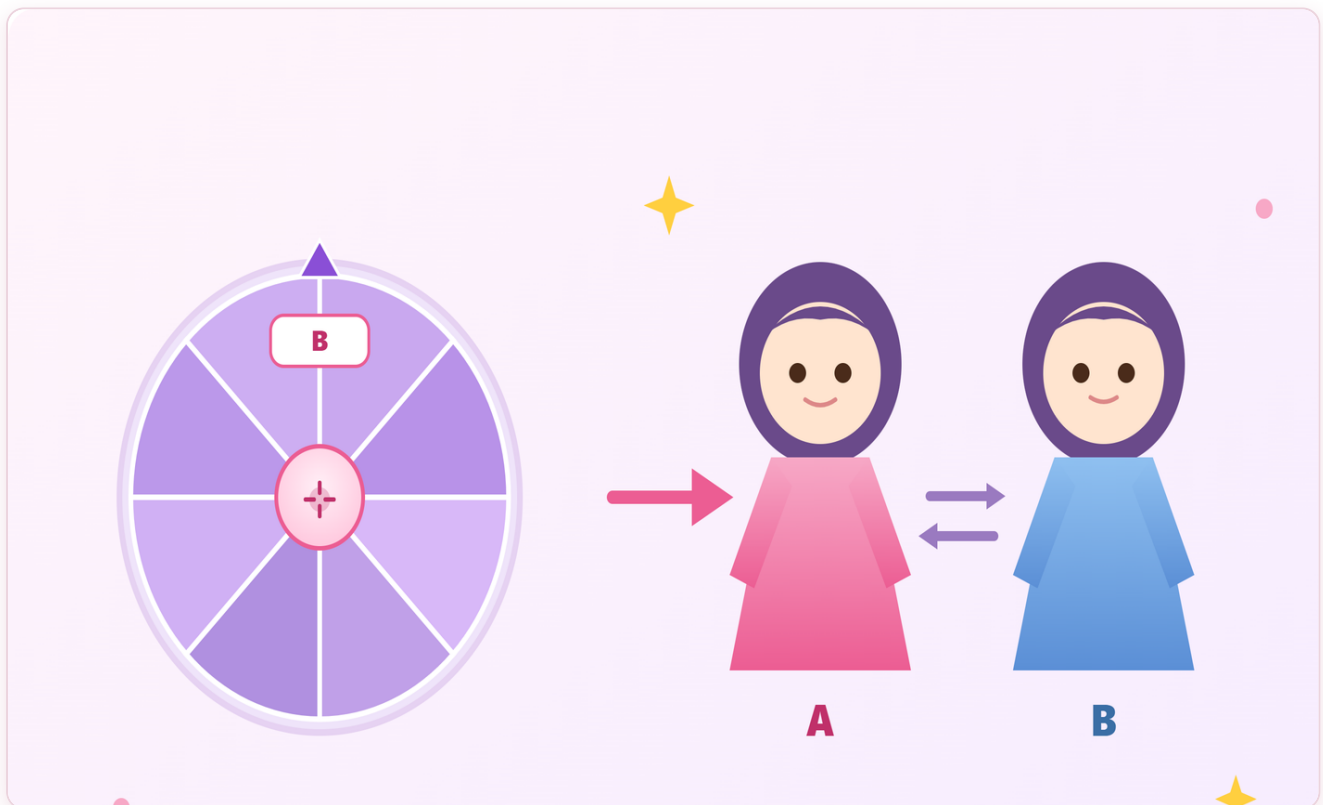

Click “Allow” in the popup inside VTube Studio (one time)

5

VTuber changes outfit/pose per wheel prize NEW PRO

The VTube Studio section (step ④) has a **“Pose per prize” table** — map each wheel prize to its own expression/outfit. When the wheel lands on a prize, your **VTuber auto-switches to that outfit/expression** (setup steps below ↓)

Each prize → your VTuber’s own expression / outfit

How to set it up (numbers match the image):

- ① First **save a wheel** (step 3) + **connect VTube Studio** (step ④), then click **“Load my hotkeys”** — only then do the prizes appear (**wheels only**)
- ② In the **Hotkey** column, pick the expression/outfit for each prize
- ③ **Group A/B/C** — outfits that **can’t be worn together** go in the same group; when a new one in that group wins, the old one **auto-removes** (e.g. black + white dress = group A, one at a time) · **different groups stack** (outfit=A + hair=B together)
- ④ **Delay / Off** — **Delay** = seconds to wait **after the prize is decided** before switching (lets the spin/alert finish first · 0 = instant) · **Off** = seconds to keep it on, then **auto-revert** (0 = stays on until another prize changes it)

 **Pose per prize** — wheel only

① Pick a wheel (step 2) + click “Load my hotkeys” first, then the prizes appear

Prize	Hotkey	Delay s	Off s	Group
Black dress	cloth_top_princess_black (Expression)	0	0	☒ A ☐ B ☐ C
White dress	cloth_top_princess (Expression)	0	0	☒ A ☐ B ☐ C
Swimsuit	cloth_swimsuit (Expression)	0	0	☒ A ☐ B ☐ C
Twintail hair	hair_Twintail (Expression)	0	0	☐ A ☒ B ☐ C

② Pick a hotkey (expression / outfit) for each prize

③ Same group = can’t be worn together (a new one auto-removes the old)

④ Delay = seconds (after the prize) before it switches · Off = seconds to hold, then auto-revert (0 = stays on)

The real “Pose per prize” table on the streamer page (VTube Studio)

Twitch — chat commands + channel points

Enter your Twitch channel, then let viewers type a command (e.g. **!spin**) or redeem channel points to spin the wheel

Wheel of Item

WheelGachaponTarotGuideDashboardEN日本語ภาษาไทย한국어Pro

5

Twitch — chat commands + channel points — optional

Only fill this in if you stream on Twitch and want viewers to **!spin** from chat or spend Channel Points / Bits. Skip it for a donation-only setup.

TWITCH CHANNEL NAME

your_twitch_username

Lowercase username (no **#**, no URL). Used to read chat commands.

CHAT COMMANDS

☐

Enable **!spin** from the channel owner & chat **PRO** (set who else below)

▶ Who can use chat commands?

▶ Display options

▶ Channel Points + Bits (Twitch) **PRO**

6

Copy your URLs + live preview

Paste these into OBS / Streamlabs Browser Source. Widget endpoint stays on **streamer.wheelofitem.com** for bandwidth isolation.

How should the widget show on stream?

☐

Popup mode — stay hidden and pop up only when a spin / donation fires, then auto-hide (like the tarot widget). **Untick** to keep the wheel / gachapon on screen the whole time.

Settings auto-save — or click Save to apply instantly

✓

Every change — wheel pick, donation source, voice, Twitch, popup, etc. — is saved to your cloud account & this browser and synced live to the OBS widget. If a save ever fails (weak connection), click **Save** to retry; the badge by step 1 shows the real status.

Save

Enable chat commands / channel points

7

Live Control NEW PRO

In the “**Copy your URLs + live preview**” section there’s a **Live Control** panel — tell the OBS widget to **spin the wheel** / **open a gacha** / **draw a card “right now”** yourself, no donation needed (great for giveaways / playing with chat)

Wheel of Item
